

LESS
doubt

MORE
confidence

MORE than a test

Xpert® Xpress CoV-2/Flu/RSV *plus*

When you need to know if it's the flu, COVID-19, or RSV, choose a test that delivers more. One that combines enhanced gene coverage and multiplex viral detection.

Coverage, plus
Accuracy, plus
Peace of mind

That's the **PCR_{plus}** advantage.
From Cepheid.

SARS-CoV-2

Flu A

Flu B

RSV

Coverage, plus

Viruses constantly change through mutation, and these mutations can give rise to new variants with unique characteristics. Cepheid has proactively addressed this increasing diversity by **enhancing gene coverage**.

The Xpert® **Xpress** CoV-2/Flu/RSV **plus** test provides a third gene target for SARS-CoV-2 as well as an optimization of nucleocapsid gene probes to enable more reliable virus detection.

Gene Targets

SARS-CoV-2

RdRP RNA-dependent RNA polymerase gene

E Envelope protein gene

N2 Nucleocapsid gene

Flu A

M Matrix gene

PB2 polymerase basic protein 2 gene

PA polymerase acidic protein gene

Flu B

M Matrix gene

NS non-structural protein gene

RSV

RSV A Nucleocapsid gene

RSV B Nucleocapsid gene

Accuracy, plus

In the Xpert **Xpress** CoV-2/Flu/RSV **plus** test, the addition of primer/probe sets for the detection of a third SARS-CoV-2 target, RdRP, will add further **redundancy for greater confidence in detection**.

In addition, Flu and RSV detection is achieved through comprehensive design across seven unique and independent targets to ensure optimum coverage and to mitigate the effects of seasonal antigenic shift and drift.

Peace of mind

Molecular methods targeting **multiple gene targets** within the viral genome allow for more reliable detection of strains undergoing genetic variation.*

The Xpert **Xpress** CoV-2/Flu/RSV **plus** test has been designed to give healthcare providers **confidence in their results and decisions**.

Choose the **PCR^{plus}** advantage. Get **MORE** than results.

* "Tests with multiple targets are more likely to continue to perform as described in the test's labeling as new variants emerge. Multiple targets means that a molecular test is designed to detect more than one section of the SARS-CoV-2 genome." <https://www.fda.gov/medical-devices/coronavirus-covid-19-and-medical-devices/sars-cov-2-viral-mutations-impact-covid-19-tests>

CE-IVD. *In Vitro* Diagnostic Medical Device. May not be available in all countries.
